Try/Catch within BP

Hello everyone,

I'm facing an issue i would like to resolve :).

I have a BPL which throw a DTL. My DTL has many reasons to raise an Exception.

I would like to catch this exception within my BP with a SCOPE but it does not work.

The BP seems to catch its own Exception but does not care at all of my DTL Exception.

So, is it possible to use the SCOPE in my case ? Otherwise, how can I handle the exception in my DTL ?

Thanks a lot for your reply.

Matt.
