## Installing Atelier Plugin

Hi All,

I've got Eclipse installed (Javascript 2019-6) but when search for Atelier from the market place within the IDE it does not show up.

I found it in the browser version of the marketplace, and tried to drag it in but got the message 'The following solutions are not compatible with this version of Eclipse'.

I tried installing an older version of Eclipse (photon) but the installer keeps telling me I haven't got JRE 1.7+ installed (I have 1.8 64bit installed already), and sends me to a download page so I can't continue.

Is there an updated version of Atelier (even a beta) in the works that anyone knows of?

Thanks

Colin
