POST Not working for REST API - Method not found Error

Hello Community,

Hope someone can assist me to POST a JSON to the below URL. It works perfectly with POSTMAN. But when trying with cache/Ensemble i receive Method not found error

Below is the configuration.

The screenshot shows a configuration window for an HTTP Server. It has four main sections: 'HTTP Server' with a text field containing 'dummy.restapiexample.com'; 'HTTP Port' with an empty text field; 'URL' with a text field containing '/api/v1/create'; and 'Credentials' with a dropdown menu set to 'None' and a magnifying glass icon to its right.

```
set ..Adapter.ContentType="application/json"  
Set tURL=..Adapter.URL  
Set pRequest={"name":"abc1jim23","salary":"123","age":"23"}  
set tSC=..Adapter.PostURL(tURL,.tHTTPResponse,,pRequest)
```

Response is complaining about the Method not found Http error.

Assistance will be appreciated.

Thanks,

Jimmy Christian.
