Report Generator for InterSystems IRIS Data Platform - What are you using

Hi all,

we are wondering if anybody has a reporting tool that is capable using IRIS Objects?

I know there are things like Crystal Reports and others out there who can read the SQL Data through ODBC but we need the capability of using object methods while running the report.

Since now we were using a JAVA based report generator (ReportWeaver) but since the object binding for JAVA doesn't exist anymore in IRIS data platform, did any of you have an alternative report generator?

Looking forward to any answers

cheers

Stephan
