Debugging ClassMethod with output parameters

I am fairly new to Cache and ObjectScript. I have a new task I have created with a corresponding method that I am trying to debug in Studio (2013).

My ClassMethod looks like this

```
ClassMethod DoMyWork(Output pWorkCount as %Integer, pInput1 As %Integer = 30)
{
    /* Does some work here and increments pWorkCount */
}
```

When I try to debug this using studio, I browse to my method but I am not certain what to put in here for the input parameter 'pWorkCount'.

I tried to execute the class in the terminal window but I am not sure how to enter debug mode using the terminal window.

Thanks.
