Remove a segment from the HL7 Message

Hi,

I have a ORU message, which has a EVN segment that I want to remove and send the message across.

I tried to clone the request as below:

```
s newreq = request.constructClone
```

```
s changreq = newreq.RemoveSegmentAt("EVN")
```

```
Set request = changereq
```

but it fails. Is there a way that I can safely remove a segment and pass it on?

Would appreciate your help in this

Regards,

Eric
