## Error copying CSP files to prjoect

I am trying out Atelier. I have installed it and managed to get it to connect to a cache instance to test it. I have created a local project and I am trying to copy the server files to it using the "Copy to Project" item on the popup menus. I can copy both classes and routines to the project without issue, but when I try to copy the CSP files, I get the following message:

`com.intersystems.atelier.utils.CheckedExceptionWrapper: Input length = 1`

The documentation is not helping. Can anyone throw some light on what is causing this? I feel certain it is a misconfiguration or a setting I have missed.
