Docker image with HL7 v2 support?

Hi

I've had a play with the Docker image for IRIS Community Edition, but was disappointed to find that it seems to lack any of the HL7 v2 features that I'm familiar with in Ensemble/HealthShare. Is there another image with these features enabled (IRIS for Health Community Edition perhaps?) or is there any plan to make such a Docker image available? I'm a big fan of the move towards publishing Community Editions of your tools as this makes it possible to both maintain skills when work dictates using other technologies and licensed installations are not available, and also pursue development tasks purely as a hobby / personal development activity. However, the lack of the HL7 features is a big omission.

Thanks

Duncan
