Error on Trakcare Report

Hi,

I am trying to create a new report on Trakcare. I created a class file and corresponding crystal report. It works fine and data is populating when I try to run on crystal environment. But when I make a setup on Trakcare and click on print option, I am getting an error on print history " VB error in tkCrystalJob] Error number[-2147417848] Method "~ of object "~failed [at line 421]". If I click on print preview option its going to empty browser. Inorder to setup new report, already made set up on report manager and menu manager.

Can anyone have any idea abt this error?

Thanks
