Adding a header line to a file

I have set up a process to produce a daily file to be submitted to another system and this is working (using EnsLib.RecordMap.Operation.FileOperation). However, the file needs to have a header line added each time it is created so it can be processed by the down stream system. Looking though EnsLib.RecordMap.Operation.FileOperation and EnsLib.File.OutboundAdapter, I can't see where I can do this easily. Any suggestions?

Thanks

#Ensemble
