%Save() is not saving data into cache DB.

I have created below Add method in REST api, I got requested data in objExternalUser object but it is not saved to DB.

Using "Write objExternalUser.%JSONExport()" I got JSON data.

Please refer below screen.

```
ClassMethod AddExternalUser() As %Status
```

```
{
```

```
SET stat = $$$OK
```

```
TRY //some basic validation here.. we are checking that the data we received is indeed a JSON fi
```

```
{
```

```
SET objExternalUser = ##class(LISDB.ExternalUsers).%New()
```

```
SET stat = objExternalUser.%JSONImport(%request.Content)
```

```
IF $$$ISERR(stat) {
```

```
    #; error handling
```

```
    #; write !,"error: " _ $system.OBJ.DisplayError(stat)
```

```
    DO $system.OBJ.DisplayError(stat)
```

```
    QUIT
```

```
}
```

```
ELSE
```

```
{
```

```
    #; Write objExternalUser.LastName
```

```
    Write objExternalUser.%JSONExport()
```

```
    DO objExternalUser.%Save() //Insert Records to DB
```

```
}
```

```
}
```

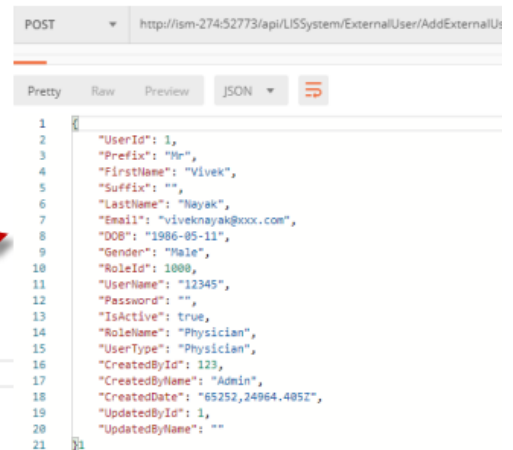

```
CATCH
```

```
{
```

```
}
```

```
QUIT stat
```

```
}
```
