How to get last inserted RowID when %Save() function is used?

I need RowId of inserted record.

I have used below logic to get max row id,

but it will not give desired result when multiple people enter record in the table at the same time.

```
{
  #; DO objExternalUser.%Save()
  SET status=objExternalUser.%Save()

  IF $$$ISERR(status) {
    #; error handling
    d $System.OBJ.DisplayError(status)
  }
  ELSE{
    IF (status=1) {
      &sql(SELECT max(Id) INTO :ID FROM LISDB.ExternalUsers)
      Write ID
    }
  }
}
```
