Launch Terminal from Management Portal

Hello!

I am taking the 'Creating an InterSystems Class Definition' course, and the Exercices asks to open a Terminal from the Management Portal to create and interact with a new object. I didn't found how to acces tot the Terminal from the Management Portal, and the documentation I have seen doesn't help me... 🙁

In some moment I saw a video wich explains how to acces to the terminal, but I can't find it ¿Can someone explains me how to find the Terminal acces?

Thank you!
