Five Experiences to Choose from at Global Summit

Hi Community:

Interested in getting hands-on with our technology? Come to Global Summit, where you'll find five experiences to choose from in the Experience Lab:

- The Machine Learning Toolkit on OpenExchange
- The Next Evolution of APIs
- Working with the FHIR Resource Repository
- Using AI Services to Build Intelligent Apps
- Containerizing Apps with InterSystems IRIS

If you've never tried these out, Experiences are guided exercises in which you engage with our technology. Each Experience starts with a brief introduction outlining a particular task. Then you complete the task on your own laptop. Sales engineers and other experts are on hand to offer advice and assistance.
