Efficient way to convert a large xml file to csv

Hi,

I have a large XML zen report file that I want to convert to a CSV, what is the most efficient way to do it.

XML file:

```
<Details>
<Col1> aa1 </Col1>
<Col2> bb1</Col2>
<Col3> cc1 </Col3>
</Details>
<Details>
<Col1> aa2 </Col1>
<Col2> bb2</Col2>
<Col3> cc3 </Col3>
</Details>
```

Expected Output:

```
Col1,Col2,col3
aa1,bb1,bb1
aa2,bb2,bb2
```

Thank you.
