Clean up code after compile

After upgrading I ran a `$$$SYSTEM.OBJ.CompileAllNamespaces("u")`. What I got in return was kind of a shock.

In reviewing errors I am seeing code being referenced but no longer applies. It is referring to stuff that might of been defined in the Context , Formal Spec ,Thread , etc.

ERROR #5373: Class 'osuwmc.CPD.DataStructures.TblPharmacyDEA', used by 'osuwmc.CPD.BusinessOperation:SelectProviderTempDEA:FormalSpec', does not exist

ERROR #5373: Class 'osuwmc.FeederPat3BPLTest4', used by 'osuwmc.FeederPat3BPLTest4.Thread1:compileafter', does not exist

ERROR #5373: Class 'osuwmc.DataStructures.MERDABFile.Batch', used by 'osuwmc.CodingBackloadToMidasMERbk:dependson', does not exist

ERROR #6301: SAX XML Parser Error: invalid document structure while processing Anonymous Stream at line 1 offset 1

ERROR #5496: Inverse property, 'osuwmc.CPD.Evariant.PracticeGroup.Record:%ParentBatch', is not defined, 'osuwmc.CPD.Evariant.PracticeGroup.Header:Records'

Is there a program or code that could be run to clean any orphaned code/files that may exist?

Should I concern my self with these errors or just ignore them? Or should I contact WRC?

Thanks

Scott Roth
