##class(%SQL.Statement).%ExecDirect() method not work

Hi Team,

When I use below statement , I got SQLCODE=0.

```
SET rs = ##class(%SQL.Statement).%ExecDirect(,"SELECT * FROM LISDB.ExternalUsers WHERE UserId = 83")
```

If I display above query using `Write(rs.%Display())` it gives me below result but `(rs.%Get("Prefix"))` method give me null value.

The screenshot shows a REST client interface with a GET request to `http://ism-274:52773/api/LISSystem/ExternalUser/GetExternalUser/83`. The response status is 200 OK. The response body is a JSON array containing one user record.

```
[{"UserId": 83, "Prefix": "Mr", "FirstName": "Vivek", "MiddleName": "M", "LastName": "Nayak", "Suffix": "Terry town", "Address1": "Suffolk County", "Address2": "Holtsville", "County": "NY", "City": "00501", "State": "US", "Zip": "Vivek.nayak@ismnet.com", "Country": "9999999999", "Email": "8999999999", "CellPhoneNumber": "11111", "WorkPhoneNumber": "8999999999", "Ext": "1000", "Fax": "Vivek.naya@ismnet.com", "RoleId": "123456", "RoleName": "Admin", "IsActive": "1", "IsDeleted": "0", "CreatedDate": "2019-09-17 15: 39: 18", "UpdatedDate": "2019-09-17 15: 39: 18"}]
```

Please help
