eFax

I am having trouble sending URL encoded payload to eFax in FormData. Does anyone have experience working with the eFax? Their support is not the greatest.

This is what I am trying to send

```
s rObj.ContentType="application/x-www-form-urlencoded"
```

```
d rObj.InsertFormData("id", "123456789")
```

```
d rObj.InsertFormData("xml", $zcvf(filestring,"O","URL"))
```

Any suggestion would be greatly appreciated.
