The studio is very slow on a specific namespace

Hello, everyone,

I'm trying to find solutions to a problem that's becoming quite boring.

On only one namespace, the studio is very slow.

The studio freezes completely for 5-10 seconds when I save or compile a class. Sometimes it also freezes for no apparent reason at a random time...

It stops when I change namespace...

Do you have any idea what that could be?

Thank you in advance
