FTP(S) Outbound Adapter disconnecting

Hi community,

I created a business operation class using the FTP Outbound Adapter, and it works when configured for SFTP but when I try to use it for FTPS, it does not work as expected. The connection is established, it creates the file on the destination server but then is disconnected in the middle of the transfer and the PutStream returns 0 and never seems to finish the write of the file. Anyone have any idea of what's happening or any steps I can try to troubleshoot?

Thanks in advance.

Info:
Connected to FTP Server '<server>:<port>/<user>/SSL='GenericFTPSSSL/TSL*'
at path '/
using Credentials '<credentials>'
