<INVALID OREF> error and try to debug in the code

Hi,

I got the <INVALID OREF> error in the component and the error screenshot as follows:

Header	Body	Contents
ID:	2385008315	
Type:	Error	
Text:	ERROR <Ens>ErrBPTerminated: Terminating BP [REDACTED] # due to error: ERROR #5001: Internal exception encountered: <INVALID OREF> 192 zProcessRequest+8^Odx.Hosts.Process [REDACTED] 1 > ERROR #5001: Internal exception encountered: <INVALID OREF> 192 zProcessRequest+8 [REDACTED] 1	
Logged:	2019-10-07 16:37:04.798	
Source:	[REDACTED]	
Session:	1372627783	
Job:	57824	
Class:	Ens.Actor	
Method:	MessageHeaderHandler	
Trace:	(none)	
Stack:	<ul style="list-style-type: none">• \$\$^zMessageHeaderHandler+314^Ens.Actor.1 +1• \$\$^zOnTask+42^Ens.Host.1 +1• DO^zStart+62^Ens.Job.1 +2	

When I try to debug in the code, I go to the class and view other code in eclipse and find out the error method. How should I determine which line threw the error according to the error? There is the line number"+8" in zProcessRequest method. Is that the line counted from the method name or below? Looking forward to your reply. Thanks.
