New to IRIS. How do I read in a CSV file?

I'm trying to read in a CSV file and map to MFN^M16. The first problem I'm having is getting the Service to read the file without causing errors (see below). I'm using `EnsLib.File.PassthroughService` because (as I understand it) it allows for anything.

ERROR <Ens>ErrBPTerminated: Terminating BP CSVtoHL7M16 # due to error:

```
ERROR <Ens>ErrorException: <PROPERTY DOES NOT  
EXIST>zOnRequest+1^EnsLib.MsgRouter.VDocRoutingEngine.1 *DocType,Ens.StreamContainer -- logged as '-'  
number - @" >  
ERROR <Ens>ErrorException: <PROPERTY DOES NOT  
EXIST>zOnRequest+1^EnsLib.MsgRouter.VDocRoutingEngine.1 *DocType,Ens.StreamContainer -- logged as '-'  
number - @"
```

What am I missing?
