Full kit versions of InterSystems IRIS and InterSystems IRIS for Health for Developers!

InterSystems is pleased to announce a new [Developer Download](#) site providing full kit versions of InterSystems IRIS Community Edition and InterSystems IRIS for Health Community Edition. These are available free of charge for application development use.

You can download directly from the [InterSystems Developer Community](#) by selecting [Download InterSystems IRIS](#).

Those instances include a free built-in 13-month license. They are limited to 10GB of user data, will run on machines up to 8 cores, support 5 concurrent connections and are supported for application development. Available Platforms: RedHat, Ubuntu, SUSE, Windows and macOS.

InterSystems IRIS and InterSystems IRIS for Health are also available in container format from the [Docker Hub](#).

Please check [here](#) for information on how to get started, visit the [InterSystems IRIS Data Platform page](#) and the [InterSystems IRIS for Health page](#) on our website to learn more about our products, and visit the [Developer resource page](#) to get deeper with development.

If you previously registered for an InterSystems Login account (e.g. for the Developer Community or WRC Direct), you can use those credentials to gain access to the Developer Download.
