Import a WSDL to generate SOAP Operations

I have the following message when I try to import a WSDL to generate a SOAP service:

ERROR #5319: The type of a property of a class series cannot be recurring:
SeleneHL7Service.hl71.escapeType:escape
  > ERROR #5030: Error occurred while compiling SeleneHL7Service.hl71.escapeType class

I have found in the documentation:

5319	The type of a property in a serial class cannot be recursive: %1

What means?

How could fix it?

#SOAP #Caché
