How to send a file via JSON

I have a text file that I pick up in a Business Service and need to send it to our vendor via JSON. I assumed (probably wrongly) that I could just create a RESTful Business Operation, plug in the server IP and URL as well as complete some of the other fields on the BO to send the file. When I do this, I get the following error:

```
ERROR <Ens>ErrorException: <PROPERTY DOES NOT EXIST>zOnMessage+5^EnsLib.HTTP.GenericOperation.1
*HTTPHeaders,Ens.StreamContainer -- logged as '-' number - '@' Set tHeaderKey="" For { Set
tHeaderKey=pRequest.HTTPHeaders.Next(tHeaderKey) Quit:=""=tHeaderKey Set
tHeaderLwr=$ZCVT(tHeaderKey,"L")'
```

Is there some other information that I am missing? Has anyone performed a similar situation as this? I did some searching in the WRC, however I couldn't find a similar situation as what I am performing.
