What do you prefer use abbreviation or normal commands?

Hello Everyone,

I'm want to know, what is more common for your company to use, the abbreviation syntax or the complety name of commands, and why?

Ex.

S VAR=10 /D FUNC^ROUTINE F 1:1:1000

Set VAR=10 /Do Func^Routine /For 1:1:1000

set var=10 /do func^routine /for 1:1:1000

Here in my company, we are familiar with the abbreviation syntax, because to spell is more faster.
