Cache Studio: Debug->Go fails with error 6704

All of the sudden, Cache Studio's Debug->Run command started to fail with error '6704 Target has exited debugger' (German: Kein Anbinden möglich). What could be a reason of that? Today we installed Cache Web Terminal (<https://intersystems-community.github.io/webterminal/>), could it be possible that the terminal somehow hijacked some debugging api end-point? Cache for UNIX (Red Hat Enterprise Linux for x86-64) 2017.2.2

Update: any idea what error 6704 means exactly? Studio was able to launch debugging job but it unexpectedly exited? German text seems is trying to say "Can't connect"
