Backport eCQM to Astronaut VistA.

Hello,

Astronaut, LLC needs Meaningful Use QRDA c1 requirement passed. We do not have a spare engineering team to write it all from scratch. Indian Health Service RPMS <https://code.osehra.org/journal/journal/view/1576> has it in the public domain as a sub application called eCQM. We would like to backport eCQM to its close cousin our Veterans Affairs(VA) VistA variant Astronaut VistA. We would first like to simply get eCQM working in its native environment before attempting to back port to Astronaut VistA. RPMS currently uses Cache and Ensemble. I've been directed to use IRIS. I've also received the suggestion to use Cache and Ensemble but I have no licenses. I have brought up IRIS community and am now thinking of the next steps.

Suggestions are welcome on how to proceed.
