New Video: Dynamic Data with JSON

Hi Community,

New video, recorded by [@Stefan Wittmann](#), is already on [InterSystems Developers YouTube](#):

? [Dynamic Data with JSON](#)

If you are trying to consume JSON data and use it in your application, use the multi-model tools of InterSystems IRIS to dynamically convert between JSON, objects (using the Document Data Model), and SQL to use the data in just the way you need.

Learn more about the multi-model development capabilities of InterSystems IRIS on the [Learning Services site](#).

Enjoy watching the video!
