## moving code between IRIS and CACHÉ

I face the challenge to have a bunch of classes on IRIS and CACHÉ in parallel until all systems are migrated to IRIS.

Applying changes in Caché development environment and moving to IRIS is no problem

But if I have to apply a fix on IRIS there seems to be no clean way back to Caché. My actual workaround is Copy/Paste from IRISStudio to CachéStudio.  
That works for 1 Class or a few but not for a full package.

Has Atelier or VScode a better solution for this situation?

Pls. suggest.
