Clearing my cube of data

Hi I am experienced with Ensemble but working in my first DeepSee project, so forgive me if this seems elementary.

My question is, how do I clear the data out? Every time I build I am adding more and more data. But I would like to revert my cube to being 0 so I can reload it and start over? Set my row count back to 0?

I am unable to remove/purge through the management portal

-I've tried to kill my cube Do ##class(%DeepSee.Utils).%KillCube("MyCube.Cube") and then Rebuild it

Thanks In advance
