Can an inbound file service pick up a file based on all wildcards? (FileSpec field)

the file being created on the FTP server will have a format that includes the current date I would like to pull this file off the FTP while ignoring other files on the same location.

Inbound Service Class

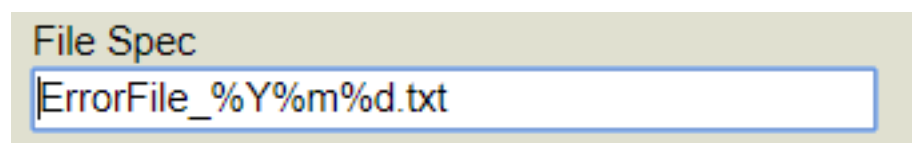

Class Name

EnsLib.FTP.PassthroughService

I would like to find the file on the FTP that is being created using Today's date. But it appears that the wildcard are not recognizing the file format:

Example below. This will not pull the file "ErrorFile20191216.txt" off the FTP but it should. Should I be using custom code or can utilize something built in to do this. Am I missing something? Thanks in advance.

File Spec

ErrorFile_%Y%m%d.txt
