Batch header and footer in Ensemble File Operation

Hello community,

I am receiving a HL7 message over TCP connection.

I have to set up a process/operation to produce a daily file with this HL7 messages to be created in a directory using `EnsLib.File.OutboundAdapter` and `EnsLib.HL7.Operation.FileOperation`. The file needs to have a header line added each time it is created and a footer. I did not find any standard class file under File Adapter which will create header/footer.

Any suggestion will be greatly appreciated.

Thanks,

Jimmy Christian
