## Connect remote server to Power BI

Hello All,

I have connected InterSystem Cache remote server from Power BI using ODBC Connection . But I am not able to view the data records on Power BI getting some error "**Value cannot be null. Parameter name: exceptionType**". And also I checked with that remote server with the location [System](#) > [System Logs](#) > [View xDBC Error Log](#) > [xDBC Errors](#) . On that place I can see the below error

```
"[SQLCODE: <-400>:<Fatal Error Has Occurred>] [Cache Error: <<READ>ServerLoop+16^%SYS.DBDRV>] [Location: <ServerLoop>] [Client info: <Username: Hp, Node Name:XXXXXXXXXX , IP Address: XXXXXXXXXXXX, Executable Name: Microsoft.Mashup.Con, Internal Function: OE>] [%protocol: <53>] $Id: //dev/2017.2.1/kernel/common/src/aclass.c#1 $ 23289 104".
```

So please help me.....

Thanks & Regards,

Vikram
