IRIS - RestAPI - websession authentication

I generated a REST API from a Swagger document with basic security.

When I send a request to that API, I now get an authentication error 401 always.

I entered a user api and a password and gave it the role %All.

I tried to call the API with the URL

<http://solidara.net:52773/csp/solidara/getcomponents/solidara?username=...>

What's am I doing wrong there?
