ObjectScript-Math available on Open Exchange!

Have you ever needed a math function but could not find what you needed and ended up writing your own? Look no further! ObjectScript-Math is here to solve all your math related function needs.

[ObjectScript-Math](#) is an Open Source library for ObjectScript Math functions. It is now available on Open Exchange. This library contains a mix of new functions that are not currently available and functions that are available. The existing functions will be wrapped for use from ObjectScript-Math so that all Math functions can have a central location.

This library will continue to grow, so give it a try and give your feedback!

Don't see what you are looking for? Please feel free to submit requests for additional functions or contribute code yourself!

I hope that there will be a lot of community participation with this project. As a reminder, you can receive points on [Global Masters](#) if you submit issues/submit pull requests.

Installation details can be found in Open Exchange. It is also compatible with the [ObjectScript Package Manager](#).
