How to quit ^%SYSMONMGR in some case?

With ^%SYSMONMGR, there are some brunches that I never found a way to quit out, like shows as the following example: do ^%SYSMONMGR --> Manage Health Monitor --> View Alert Records ...

Does anyone know the answer? thank you very much.

%SYS>do ^%SYSMONMGR

- 1) Start/Stop System Monitor
- 2) Set System Monitor Options
- 3) Configure System Monitor Classes
- 4) View System Monitor State
- 5) Manage Application Monitor
- 6) Manage Health Monitor
- 7) View System Data
- 8) Exit

Option? 6

- 1) Enable/Disable Health Monitor
- 2) View Alerts Records
- 3) Configure Health Monitor Classes
- 4) Set Health Monitor Options
- 5) Exit

Option? 2

Sensor (=All)? * =>

Beginning date and time? Beginning =>

Ending date and time date? Now =>

Number of records to display? 20 =>

No matching records found
