Cache Install Windows 10 Permission Error

I am trying to install Cache version 2018.1.0.184.0 on a Windows 10 System and i keep running into Permission errors during installation. I am getting

"Error 1406 Could not write value to key /SOFTWARE /InterSystems /Classes /CLSID {D11481CD-3B24-42E1-A20A-D179CDB6BEC5} /InstallCount"

I am signed in as an Administrator, i am running the installer as an administrator and i have edited permissions in the Registry to the referenced keys and i still can't get this to install. Has anyone run into this before and have some advice? I am pulling my hair out over here.

Any help is appreciated.
