This does not appear to be a Cache exported file, unable to import.

If you are seeing this error during import: ERROR #6301 Line: 2 Offset: 118 This does not appear to be a Cache exported file, unable to import.

This error is caused by exporting from InterSystems IRIS and trying to import into Caché. If you plan on exporting from IRIS to Caché, you can use the following qualifier to export your classes so that Caché does not throw an error on import:

```
w $SYSTEM.OBJ.Export(<items>,<filename>,"/exportversion=cache2018.1")
```

Please see [the Documentation](#) for more information about this Export Qualifier
