InterSystems Developers Community Release, February 2020

Hi Developers!

In January we introduced into Developers Community:

- New postings type - Discussions;
- No more answers - only comments-replies;
- bug fixes and small improvements.

See the details below.

Discussions

We had requests for this type of posts - when it is not an article, it's not a question which needs a discreet answer, but a discussion where you want to know people's opinions. It can be combined with polls. So, we introduced it and people already contribute [discussions](#).

Answers Conversion to Comments

A lot of people were confused with Answers: when you reply to the question, is it an answer or comment? If the comment is really an answer topic starter couldn't accept it. Search in answers or in comments?

We solved it - all answers are now comments, but you can accept comments as an answer to the question. And no more doubts about replying to a question. [See the discussion](#).

Bug fixes

We fixed a few bugs when you didn't get email notifications on some comments. We also fixed a few smaller bugs and improved the performance.

Here is [the full kanban of solved issues in January 2020](#). Here is the planned [kanban for February 2020](#).

Submit your ideas, bug fixes, contribute to Developers Community and stay tuned!
