M is in the cell

Ladies and gentlemen, good news for our town.

It finally happened - M was put in the cell.

And feels great there. Maybe it not a prison but an Excel cell.

Being there, he leads the whole M-gang. As well as conditional formatting in EXCEL.

Close integration of excel with the database provides a new convenient design tool.

Interactive reports, input forms, diagrams are generated only by m-commands in cells, without classical programming.

More detailed on https://github.com/mx-alex/MX

We will monitor the development of the situation and answer your questions.

best wishes

Alex
