I keep getting ERROR #6159 when trying to read in a WSDL file from the server

I am using the SOAP Wizard in Studio to try to read in a WSDL file that is physically on our HealthShare server. I keep getting the same error:

ERROR #6159: Although HTTPS is turned on no SSLConfiguration is specified so unable to make an HTTPS connection.

As I am not trying to connect via HTTP (and I don't see anywhere to add an SSL connection), I am not sure what I am doing wrong.

Any suggestions & solutions gratefully accepted.

I keep getting ERROR #6159 when trying to read in a WSDL file from the server

The screenshot shows the SOAP Wizard application window. At the top, it says "Server Template SOAP Wizard" and "User: Leon Namespace: DEPLOR524". The main area displays a red error message: "ERROR #6159: Although HTTPS is turned on no SSLConfiguration is specified so unable to make an HTTPS connection." Below the error, there is explanatory text and two radio button options: "CACHE user name and password" (selected) and "HTTP authentication user name and password". There are input fields for "Username:" and "Password:" and a "Try again" button. Further down, there are "Options to control class generation and compilation:" with checkboxes for "Create Client for Web Service", "Create Web Service", and "Compile generated classes". The "Compile flags" field contains "dk". There are also radio buttons for "Class Type:" (Persistent, Persistent using one-many relationships, Persistent using indexed one-many relationships, Persistent using parent-child relationships, Serial) and checkboxes for "Create Business Operation", "Business Operation Package", "Request Object Package", and "Response Object Package". The "Proxy Class Package" is set to "HFT.Operation.Graphnet". At the bottom, the "WSDL Document" path is "E:\TEST\Graphnet\WDSL\MessagingService.wsdl". A code editor shows the XML content of the WSDL file, including namespace declarations and schema definitions. At the very bottom, there are buttons for "Back", "Next", "Finish", "Cancel", and "Help".
