## How can we set the displayed label of a SETTING in the portal ?

Hi,

I need to set the label of a custom setting in the portal instead of the name of the associated property, eg.:

```
Class SomeClass Extends (Ens.BusinessService, %ZEN.Portal.ContextSearch)
{
Property ABadPropertyNameToChange As %Boolean;

Parameter SETTINGS = "ABadPropertyNameToChange:CustomSettingsSection"
}
```

will result in this in the portal

```
-----
CustomSettingsSection

ABadPropertyNameToChange

[]
```

It has to be possible because if you look at the Basic settings of a Business Service (just an example), there is a setting named "Call Interval" and I doubt that the associated property has a blank space in its name.

SETTINGS
