Beta testers wanted for new CCR Angular UI

Hundreds of users at TrakCare and HealthShare sites around the world rely on the InterSystems CCR Application (Change Control Record) to track their changes and deploy their configuration. InterSystems is excited to announce that following the launch of the Angular-based Documentation and FAQs this summer, the CCR application is now ready to accept beta testers to try out further expansion of the Angular UIs.

Users at CCR-controlled sites who wish to participate in the beta testing of the new UI can "opt-in" using the following steps:

1. Navigate to <https://ccr.intersystems.com/ccr/detailsUser.csp>
2. Check the "Beta Tester: " checkbox and click "Save"

At this point you will automatically use the beta version of the following UIs:

- Masthead/Side Navbar
- Home Page
- System Details
- Org Details
- Org Import
- User Details
- User Import
- CCR Reports

Additional pages will be added to the beta program in the future.

If for some reason your work is blocked by a bug in the new UI, you can remove the "Beta Tester" flag from your account and get back to the original UI.

Please feel free to report any feedback on this thread, or via your normal Support channels.

Thank you for trying out the new interface and letting us know if you see any issues with rolling it out to a wider audience!
