Terminal connection from vs code to local instance (one way)

I was searching for the most simple way to connect from visual studio code to my local instance via terminal without having to change any window.

I know this can also be achieved via telnet but seems a bit overhead if you're in your local machine.

For me the simplest solution is to open a terminal window in VS Code, navigate to the /bin folder of your instance installation and run `.\csession.exe INSTANCENAME`

For simplicity you can just include your /bin folder in your path so you don't even need to navigate there

```
PS C:\Roche\CobasInfinity\HealthShare\bin> .\Csession.exe DEV

Node: WIN-DIN64Q8NPOQ, Instance: DEV

Username: _SYSTEM
Password: *****
ACB>
```

In fact if you've added some remote instances as remote connections on your instance, you can also access them.

That's it!
