Simple Angular app + InterSystems IRIS example

Hi all!

I'd like to share the code we used in a hands-on session in the last InterSystems Iberia Summit (Spain) about developing a simple Angular app using InterSystems IRIS as backend.

In this sample we will:

- Import data from a public dataset and store it in InterSystems IRIS.
- Create automatic REST APIs using [RESTForms2](#).
- Build an Angular 8 app to consume the data from the InterSystems IRIS backend.

Full instructions are available in the [GitHub repository](#).
