How to Set Data in a Property from a Routine

Hello,

I am wondering if it is possible to access properties of a class from within a routine that has been called. See the below example:

```
Class TestClass Extends %RegisteredObject
```

```
{
```

```
Property Data As %ListOfDataTypes;
```

```
Method Query(parameter As %String)
```

```
{
```

```
    d runTag^ExampleRoutine(parameter)
```

```
    q
```

```
}
```

```
}
```

And then I have a routine:

```
ExampleRoutine
```

```
runTag(parameter)
```

```
    ;I want to add some information to the Data property in the class here.
```

```
    q
```

```
#Caché
```
