how to create one VALUELIST from a class parameters ?

Hello everyone!

I have an abstract class representing the possible inputs for an Enum field, in the following way:

```
 Class system.dto.sector.SectorStatusEnum  [ Abstract ]
{

 Parameter Active = 1;

 Parameter Inactive = 2;

 Parameter Production = 3;

 Parameter Upkeep = 4;

 }
```

I need to create a persistent class referencing the abstract class in the status field, so that the result of the operation is the same as the example:

```
 Class datas.TblSector Extends %Persistent
{

Property Description As %String( MAXLEN = 100 ) [ Required ];

Property Status As %String(

VALUELIST="
,1,2,3,4", DISPLAYLIST=", Active, Inactive, Production, Upkeep") [ Required ];

}
```

Can someone help me pls?
