Table of segment types for the Interoperate/X12 Schema structures?

Hello; we are scanning 835 files, and need to validate segment types (such as ISA, ST, IEA, etc.) before we give the file the "OK". I see segment types in the management portal under Ensemble / Interoperate / ASC X12 / ASC X12 Schema Structures. Are these segment types stored in an IS table anywhere?

Aside from EnsLibEDIX12.Document, are there any other tables that describe, or support, document segment types?

Thanks,

Laura
