## Special permissions to backup user

Hi,

I'm using Operating System authentication and I need to give permission on Healthshare to allow a user to run only this two commands

```
##Class(Backup.General).ExternalFreeze()
```

and

```
##Class(Backup.General).ExternalThaw()
```

This user is gonna be use to backup only.

There are any role on HealthShare for this?

[#Authentication](#) [#Backup](#) [#Security](#) [#HealthShare](#)
